Week ending August 2, 2024

The first week of August saw mixed performance across asset classes and ended with a two-day selloff in the equity markets. Multiple data points suggest a softening labor market (nonfarm payrolls well below expectations, increasing unemployment rate triggered two recession indicators, above expectation initial jobless claims, and above expectation number of job openings) and a downward revision to GDP growth helped contribute to the downside volatility. Resulting from the increased uncertainty, we saw the VIX Index hit a one-year high breaking above 29 on Friday. While not guaranteed to repeat, historically large VIX spikes have signaled a near-term market bottom in stocks.

Fixed Income Markets Overview

- The Federal Reserve left interest rates unchanged while expectations for a September rate cut remain high and are increasing for the potential of multiple rate cuts this year.
- Yields fell between 8 and 50 basis points across the yield curve, except for a 5 bps increase in the 1-month yield as investors sought safety in fixed income. While the 2Y-10Y spread remains inverted, it is at its lowest level since July 2022 leaving some to wonder if the more than 2-year long inversion is coming to an end.
- Mortgage rates continue to fall reaching their lowest levels since early February. As home price growth is moderating and housing inventories are increasing, there may be some signs of relief for potential homebuyers.
