Week ending October 25, 2024

Last week was eventful week as markets experienced notable movements driven by various factors. Rising bond yields contributed to interrupting the S&P 500's six-week streak of gains, as stronger-than-expected economic data continue to temper expectations surrounding rate cuts. The US stock market saw mixed results as the S&P 500 and Dow fell; while the NASDAQ posted its seventh consecutive weekly gain, due to the tech sector being one of the only sectors with positive growth for the week. The yield on the 10-year U.S. Treasury note climbed, reflecting investor caution about inflationary pressures and future interest-rate cuts. Despite the down week and rising rates, the U.S. economy continues to appear resilient as initial jobless claims have continued to come in below estimates, GDP growth expectations remain around 3% for 2024, and recession expectations continue to decline.

## Fixed Income Markets Overview

- Bond yields rose across most of the curve last week, with the largest increases occurring for intermediate- and long-term rates while short-term rates modestly fell. Due to the recent increases, the yield curve is approaching a flat structure.
- As more strong economic data comes in it continues to support the Federal Reserve taking a more patient approach to interest rate cuts, which has led to a repricing of future rate expectations. As of last week, the expectation for the Fed policy rate at the end of 2025 came in at 3.5%, up from 2.9% last month.
- Mortgage rates increased for the fourth week in a row with the 30-year average hitting 6.54% due in part to the continued strong economic data coming in recent weeks. Housing data has been somewhat mixed as new home sales have grown recently while previously owned home sales have declined.
