Week ending November 22, 2024

Last week, bullish market sentiment supported investors “buying the dip” throughout the week as buying pressures helped push the S&P 500 up 1.7%, despite dips throughout the week. Nvidia's earnings report showed strong results. However, the stock traded down for the second quarter in a row following a positive post-earnings release, possibly indicating high expectations are weighing on investor enthusiasm. The technology sector's performance was mixed, with semiconductors underperforming due to concerns about tighter export restrictions to China. Overall, optimism about potential positive impacts from the next administration's policy changes and a strong U.S. dollar contributed are influencing market psychology and contributed to the market's upward momentum.

Fixed Income Markets Overview

- Shorter-term bond yields saw an increase as Treasury yields for maturities three years and shorter rose between 2 and 8 basis points, except for the 2-month yield that remained flat over the prior week. Yields for maturities 5-years and longer remained relatively stable.
- Expectations for future Federal Reserve rate cuts eased, with probabilities suggesting a 55% chance of a 25-basis-point cut at the December FOMC meeting, down from 58% the previous week.
- After a brief pause the week prior, mortgage rates continued to tick back up this week as they approach 7%. The increasing rates resulted in downward pressure on purchase demand, which increased for-sale inventory and contributed to falling demand for new construction.

Alternative Markets Overview

- Oil prices were up about 6% for the week, their highest settlements in over two weeks as the Ukrainian conflict intensified with Russia becoming more aggressive after Britain and the U.S. allowed Kyiv to strike deeper into Russia with their missiles.
- Gold prices breached the \$2,700 threshold for the first time in over two weeks on Friday, posting a 5.5% weekly gain which is among its largest weekly gains in nearly two years.
- Bitcoin's price continues to flirt with breaching \$100,000 as the recent bullish rally continues. The crypto currency posted an 8.5% gain for the week further fueling its leading YTD performance of over 133%. After spending most of the year trading sideways, the cryptocurrency has been on an upward tear following the election results.
