Week ending July 11, 2025

Last week, capital markets showed resilience despite escalating global trade tensions. U.S. equities hovered near record highs, supported by strong performances in the energy and industrial sectors. However, momentum began to wane following the announcement of a wave of new tariffs targeting over 20 countries, including steep increases on imports from Canada, Brazil, Japan, and South Korea. The S&P 500 and Nasdaq posted slight weekly declines after a strong two-week rally, reflecting investor caution amid policy uncertainty. Bond yields were volatile, initially falling on expectations of future rate cuts but rising again by week's end due to inflation concerns tied to tariffs. Meanwhile, copper and silver prices surged, with copper hitting a record high following a 50% tariff announcement. Bitcoin also rallied, surpassing \$118,000 for the first time. Looking ahead, markets are bracing for the start of Q2 earnings season and key inflation data, which could further influence investor sentiment.

## Fixed Income Markets Overview

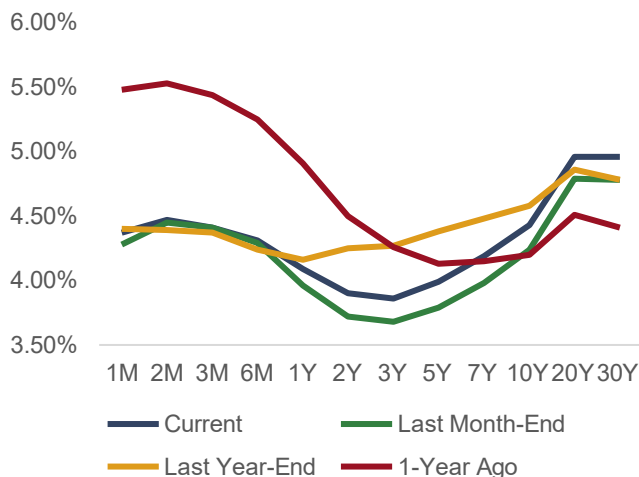

- Treasury yields moved higher, particularly on the long end of the curve as the yield curve continues to steepen. The tick higher in yields was due to the markets reacting to stronger-than-expected labor market data, passage of the One, Big, Beautiful Bill, and the latest tariff developments.
- Investment-grade corporate bonds saw modest spread tightening, supported by solid earnings expectations and continued demand for high-quality credit.
- Market participants closely watched Fed commentary, with policymakers signaling a data-dependent approach, keeping fixed income investors cautious but engaged. Expectations around potential rate cuts were little changed this week, supported by the tone out of the FOMC Minutes. Per Bloomberg, expectations for a cut at the July FOMC remain near zero, while the total number of expected cuts in 2025 dropped slightly.

## Equity Markets Overview

- US and International equities ended the week slightly down, despite the S&P 500 and Nasdaq hitting a new intraday all-time high on Thursday. Markets experienced a mild selloff after bumping around all week as investors reacted to the passage of the One, Big, Beautiful Bill and new tariff announcements from the U.S. targeting multiple countries.
- Energy and industrial sectors outperformed, driven by rising commodity prices and optimism around infrastructure spending. Technology stocks saw some profit-taking, especially after recent strong gains, contributing to the Nasdaq's underperformance.
- Market participants looked ahead to Q2's earnings season, with expectations for solid corporate results helping to cushion downside pressure. Economic data remained generally supportive, with jobless claims and consumer sentiment pointing to continued resilience in the U.S. economy.

## Alternative Markets Overview

- Gold prices rose just under 2% last week as investors sought safe-haven assets following the latest round of tariff news, while silver reached its highest level in over 13 years.
- Oil prices rose over 2% last week, closing at \$68.45/barrel. The tick up in prices followed an announcement by the International Energy Agency that the oil market was tighter than it appears, plus U.S. tariffs and possible further sanctions on Russia were also in focus.
- After slipping below the \$100,000 price level a few weeks ago, Bitcoin's price climbed above \$118,000 for the first time on Friday, posting a weekly gain of nearly 10%.
